

Sebastian Wang

ABOUT ME

As a fifth-year student at Chalmers University of Technology, I am pursuing an M.Sc. in Product Development after completing a B.Sc. in Automation and Mechatronics. I enjoy combining creativity and technology to develop innovative, user friendly solutions. Through my studies and practical experience, I have built a strong technical foundation in project management, process optimization, prototyping, CAD and ecologically sustainable design. I also enjoy collaborating in teams to solve complex problems practically and develop technology that creates value and simplifies everyday life.

EDUCATION

Chalmers University of Technology

- Master of Science (M.Sc.) in Product Development (2025 – 2027)
- Bachelor of Science (B.Sc.) in Automation and Mechatronics Engineering (2022 – 2025)

Relevant courses: Data Structures and Algorithms, Robotics and Mechatronics, Automation Control, Machine Learning, Image Analysis, Sustainable Product Development and Design, Project Management, CAD

Sigrid Rudebecks Gymnasium

- Natural Science Programme (Graduated 2022)

WORK EXPERIENCE

Supply Chain Excellence Intern - Indirect Material, SKF (Jun to Aug 2026)

- Supported indirect material purchasing for MRO and CAPEX projects by analyzing procurement data, evaluating suppliers, and identifying process improvement opportunities.
- Collaborated with cross functional teams to optimize procurement processes and improve supply chain operations.

Production Intern, Auto-Line (Jun to Aug 2025)

- Optimized production lines by resolving bottlenecks through onsite team collaboration.
- Performed troubleshooting and analyzed workflows to increase process efficiency.

TECHNICAL PROJECTS

Redesign of PExA instrument (Oct 2025 to Jun 2026)

- Co-designed a medical technology instrument with improved ergonomics, usability, and clinical aesthetics.
- Constructed a functional physical prototype using CAD, 3D printing, and Arduino to evaluate and verify different design concepts.

B.Sc. Thesis: Sensor controlled exoskeleton for rehabilitation (Jan to Jun 2025)

- Collaborated to develop the exoskeleton using ROS and Unity.
- Used sensors to collect movement data that can be used by a doctor or physiotherapist.

Modular coffee machine (Oct 2024 to Jan 2025)

- Designed a sustainable and modular concept for a coffee machine using Failure Mode and Effects Analysis (FMEA) and Life Cycle Assessment (LCA) to optimize production, manufacturability, and environmental impact.

SKILLS

Software:

- CAD (CATIA)
- Python
- Arduino

Methodology:

- Project Management
- Production & Supply Chain Optimization
- Sustainable Product Development
- Additive Manufacturing
- Platform Modularization
- LCA, FMEA
- Systems Integration

LANGUAGES

Swedish (Native)

English (Fluent)

Mandarin (Native)
